PRACTICAL 5 : SIMULTANEOUS DIFFERENTIAL EQUATION

A two dimensional linear system is a system of the form :
dx/dt = a x + by
dy/dt= c x + dy
where a,b,c and d are parameters. This system can be written in matrix form as
X = AX, where
A = (a b   and   X = (x
c d)   y)
The solutions of X = AX can be visualized as trajectories moving on the x- y plane called the phase plane.

QUes 1 : Solve the following system of equations :
dx/dt = -3x- y
dy/dt = x-3y
